SUMMARY

Frontend Engineer with 5+ years in the React ecosystem (React, Next.js, Remix, TypeScript), currently building news platforms serving 1.5M+ daily visits at TX Group's 20 Minuten. Experienced owning features end-to-end in monorepo environments (framework migrations, CMS and payment integrations, performance work, etc.) often as the primary frontend point of contact in remote, cross-functional teams.

SKILLS

Core: React · Next.js · Remix · TypeScript · JavaScript · Node.js · Redux · React Context · Tailwind CSS · Material UI · styled components · SASS · NX monorepo · Storyblok CMS · REST APIs · npm package maintenance · Git
AI-assisted development: Cursor · Claude Code · Anthropic API

WORK EXPERIENCE

TX Services / [20min.ch](#)

August 2024 - present

Frontend Engineer

- Own production features across an NX monorepo powering three news portals ([20min.ch](#), [lematin.ch](#), [lessentiel.lu](#)) serving 1.5M+ unique daily visits
- Use Cursor and Claude Code daily on this codebase, owning every AI-assisted change through review and deploy
- Maintain internal npm packages consumed across the monorepo, handling versioning and cross-app compatibility
- Delivered core features of a platform-wide redesign and frontend refactor (article cards redesign, dark mode, in-app notifications, bookmarks, etc.) while reducing code complexity
- Built a standalone "Radio Widget" inside an independent repository integrated into the monorepo app, and designed a reusable PostMessage-based tracking pattern adopted for analytics across third-party widgets
- Eliminated redundant API requests caused by incorrect React effect dependencies, improving responsiveness on high-traffic pages

Peak Software Solutions / [cashload.com](#)

December 2023 - August 2024

Frontend Engineer

- Architected and delivered a reporting and analytics tool from scratch as sole frontend owner (project setup, frontend architecture, backend API integration, etc.)
- Integrated the Nuvei payment provider into a Remix e-commerce platform, delivering a secure production checkout flow for digital products
- Served as primary frontend point of contact across three concurrent projects at different maturity stages, from greenfield to legacy

InterVenture / [gowago.ch](#)

January 2022 - November 2023

Frontend Engineer

- Led a production upgrade from Next.js v12 to v13, resolving breaking changes and ensuring application stability across core user flows
- Integrated Storyblok headless CMS into a large-scale Next.js application, building reusable components that let non-technical authors ship landing pages without engineering support
- Maintained and extended a legacy B2B portal (React, Redux-Saga, SASS) with complex forms and business logic

TMS Outsource - Full-Stack Engineer

October 2020 - January 2022

PROJECTS

- **Automated content production pipeline** - Node.js/TypeScript CLI orchestrating a multi-stage AI generation workflow: Anthropic API (structured JSON outputs, prompt engineering, web search tool), [ElevenLabs](#) TTS, and [fal.ai](#) image/video generation, with human-review checkpoints between stages
- **Rental listings aggregator** ([stanovi-za-izdavanje.rs](#)) - Next.js + SQLite aggregator scraping several listing sites into one filterable feed; live and self-hosted, with scraping isolated from the web server so synchronous writes never block request handling

EDUCATION

Bachelor of Applied Studies (B.A.S.), Electrical and Computer Engineering

Graduated February 2019

School of Electrical and Computer Engineering of Applied Studies, Belgrade
